- Weber County Land Use Code Title 108 (Noncomplying Structures, Nonconforming Uses, and Nonconforming Lots) Chapter 12 (Reconfiguring Nonconforming Lots)

Background and Summary

The applicant is requesting final approval of Snow Flake Subdivision Phase 3 1st Amendment. This proposal is located at approximately 4382 Snowflake Circle, Eden, UT, 84310 in the FV-3 Zone, and seeks to combine two existing legal lots into a single lot, so that a single-family residence and detached garage may be constructed in the applicant's desired location that requires additional area. The proposed subdivision and lot configuration are in conformance with the applicable zoning and subdivision requirements as required by the Uniform Land Use Code of Weber County (LUC). The following is a brief synopsis of the review criteria and conformance with LUC.

Analysis

General Plan: The request is in conformance with the Ogden Valley General Plan as it is intended to preserve private property rights while also preserving the rural characteristics of the Valley.

Zoning: The subject property is located in the FV-3 zone. Single-family dwellings are a permitted use in the FV-3 Zone.

Lot area, frontage/width and yard regulations: In the LUC § 104-14-5, the FV-3 zone has minimum lot area and width standards for single family dwellings.

The following are setbacks for single-family dwellings in the FV-3 zone:

Front: 30'

LUC § 108-12-12 states, “Nonconforming lots may be reconfigured in a manner that complies with the standards of the zone in effect at the time of the lot's creation if the reconfiguration does not create any more lots than currently exist. The reconfiguration shall not cause any other lot to become nonconforming or more nonconforming. If the nonconforming lot is part of a platted subdivision an amended subdivision plat is required.” This proposed one-lot subdivision contains two legally platted lots, and is not creating additional lots, nor does it propose to cause any lot to become more nonconforming.

Culinary water and sanitary sewage disposal: Powder Mountain Water & Sewer has issued a capacity assessment letter that has been submitted with this application. The letter is dated 1/19/2023 and is good for two years from the date of the letter.

Review Agencies: To date, the proposed subdivision has been reviewed and approved by Weber County Engineering, Weber County Surveying, and Weber Fire District. Weber County Planning is recommending approval based upon all review agency requirements being met prior to recording the final plat. All review agency requirements must be addressed and completed prior to this subdivision being recorded.

Tax Clearance: There are no outstanding tax payments related to these parcels. The 2023 property taxes are not considered due at this time, but will become due in full on November 30, 2023.

Background and Summary

The applicant is requesting final approval for Cameron Pointe Subdivision (6 lots). This proposal would divide a vacant 6.94-acre parcel and create six new building lots. The Planning Division has reviewed Cameron Pointe for conformity to the lot area and width of the A-1 zoning standards and connectivity options for the continuation of future neighborhoods. The single road within Cameron Pointe is designed with a temporary turn-around until the time when the parcel to the south is developed, at which time, the county will require connectivity over the Wilson Irrigation Canal. Curb, gutter, and sidewalk are required within the Cameron Pointe Development and on 4000 West Street and 2375 South Street.

Analysis

General Plan: The proposal conforms to the West Central Weber County General Plan by implementing zoning standards that preserve the rights of landowners to develop large lots in which agricultural and residential uses are pursued.

Zoning: The subject property is located in the Agricultural A-1 Zone.

The purpose and intent of the A-1 zone are identified in the LUC §104-2 as:

The AV-3 Zone and A-1 Zone are both agricultural zone and low-density rural residential zone. The purpose of the AV-3 Zone and A-1 Zone is to:

1. Designate low-intensity farm areas, which are anticipated to develop in a rural residential development pattern;
2. Set up guidelines to continue agricultural pursuits, including the keeping of farm animals; and
3. Direct orderly low-density residential development in a continuing rural environment.

Lot area, frontage/width and yard regulations: The Site Development Standards from Section 104-2-5 require a minimum of 40,000 sq. ft. and 150' wide. Each lot within comply with these standards.

Culinary water: Taylor West Weber Water provided a final will-serve letter stating that the district has the capacity to provide only culinary water to the Cameron Pointe 6-lot subdivision. It is required that the plat include a signature block for the Taylor West Weber Water Improvement District. The district will not give final subdivision approval without pressurized secondary water infrastructure installed and operational.

Pressurized Irrigation water: The final will-serve letter from Hooper Irrigation states the fees are paid and a sufficient number of water shares are transferred. All secondary water line extensions shall be inspected and approved by Hooper Irrigation. Subdivision improvements related to secondary water infrastructure shall be installed or guaranteed financially before the subdivision plat can record.

Water supply delivery system: 106-4-2.1 (d) (1) (a) **"Main delivery line extents.** Culinary and secondary water main delivery lines shall be provided to the furthest extent of the subdivision boundary within a public street right-of-way or a public utility easement, and laterals shall be stubbed to each lot."

Sanitary Sewage Services: Central Weber Sewer District will serve the sanitary sewer needs of this development (see Exhibit C).

Review Agencies: The subdivision application will be required to comply with all review agency requirements. Planning has posted preliminary comments that will be addressed by a revised plat. The County Surveyor's office has submitted a final review. The Weber Fire District review states standards for the temporary turnaround cul-de-sac design. The County Engineering Department will post comments on the final plat and final civil drawings.

Staff Recommendation

Staff recommends final approval of Cameron Pointe Subdivision consisting of 6 lots. This recommendation is based on the review agency requirements and the following conditions:

1. A Subdivision Improvement Agreement shall accompany the final recorded plat.
2. A Monument Improvement Agreement is completed, under the direction of the County Surveyor's office.
3. The developer shall provide a letter from the Cameron Village Cluster Subdivision HOA stating that all parties agree upon the new landscape plan for Cameron Village.

The following findings are the basis for the staff recommendation:

1. Cameron Pointe conforms to the West Central Weber County General Plan.
2. The lot area and width regulations are acceptable as shown on the submitted plat.
3. The proposal will not be detrimental to public health, safety, or welfare.
4. The proposal will not deteriorate the environment of the general area to negatively impact surrounding properties and uses.

4.

Construction Vehicles and Equipment:

a.

Maintenance

—

Maintain all construction equipment to prevent oil or other fluid leaks.

—

Keep vehicles and equipment clean, prevent excessive build-up of oil and grease.

—

Regularly inspect on-site vehicles and equipment for leaks, and repair immediately.

—

Check incoming vehicles and equipment (including delivery trucks, and employee and subcontractor vehicles) for leaking oil and fluids. Do not allow leaking vehicles or equipment on-site.

—

Segregate and recycle wastes, such as greases, used oil or oil filters, antifreeze, cleaning solutions, automotive batteries, hydraulic, and transmission fluids.

b.

Fueling

—

If fueling must occur on-site, use designated areas away from drainage.

—

Locate on-site fuel storage tanks within a bermed area designed to hold the tank volume.

—

Cover retention area with an impervious material and install in a manner to ensure that any spills will be contained in the retention area. To catch spills or leaks when removing or changing fluids.

—

Use drip pans for any oil or fluid changes.

c.

Washing

—

Use as little water as possible to avoid installing erosion and sediment controls for the wash area.

—

If washing must occur on-site, use designated, bermed wash areas to prevent waste water discharge into storm water, creeks, rivers, and other water bodies.

—

Use phosphate-free, biodegradable soaps.

—

Do not permit steam cleaning on-site.

5.

Spill Prevention and Control

a.

Minor Spills:
Minor spills are those which are likely to be controlled by on-site personnel. After contacting local emergency response agencies, the following actions should occur upon discovery of a minor spill:

—

Contain the spread of the spill.

—

If the spill occurs on paved or impermeable surfaces, clean up using "dry" methods (i.e. absorbent materials, cat litter, and / or rags).

—

If the spill occurs in dirt areas, immediately contain the spill by constructing an earth dike. Dig up and properly dispose of contaminated soil.

—

If the spill occurs during rain, cover the impacted area to avoid runoff.

b.

Major Spills:
On-site personnel should not attempt to control major spills until the appropriate and qualified emergency response staff have arrived at the site. For spills of federal reportable quantities, also notify the National Response Center at (800) 424-8802. A written report should be sent to all notified authorities. Failure to report major spills can result in significant fines and penalties.

6.

Post Roadway / Utility Construction

a.

Maintain good housekeeping practices.

b.

Enclose or cover building material storage areas.

c.

Properly store materials such as paints and solvents.

d.

Store dry and wet materials under cover, away from drainage areas.

e.

Avoid mixing excess amounts of fresh concrete or cement on-site.

f.

Perform washout of concrete trucks offsite or in designated areas only.

g.

Do not wash out concrete trucks into storm drains, open ditches, streets or streams.

h.

Do not place material or debris into streams, gutters or catch basins that stop or reduce the flow of runoff water.

i.

All public streets and storm drain facilities shall be maintained free of building materials, mud and debris caused by grading or construction operations. Roads will be swept within 1000' of construction entrance daily, if necessary.

j.

Install straw wattle around all inlets contained within the development and all others that receive runoff from the development.

7.

Erosion Control Plan Notes

a.

The contractor will designate an emergency contact that can be reached 24 hours a day 7 days a week.

b.

A stand-by crew for emergency work shall be available at all times during potential rain or snow runoff events. Necessary materials shall be available on site and stockpiled at convenient locations to facilitate rapid construction of emergency devices when rain or runoff is eminent.

c.

Erosion control devices shown on the plans and approved for the project may not be removed without approval of the engineer of record. If devices are removed, no work may continue that have the potential of erosion without consulting the engineer of record. If deemed necessary erosion control should be reestablished before this work begins.

d.

Graded areas adjacent to fill slopes located at the site perimeter must drain away from the top of the slope at the conclusion of each working day. This should be confirmed by survey or other means acceptable to the engineer of record.

e.

All silt and debris shall be removed from all devices within 24 hours after each rain or runoff event.

f.

Except as otherwise approved by the inspector, all removable protective devices shown shall be in place at the end of each working day and through weekends until removal of the system is approved.

g.

All loose soil and debris, which may create a potential hazard to offsite property, shall be removed from the site as directed by the engineer of record of the governing agency.

h.

The placement of additional devices to reduce erosion damage within the site is left to the discretion of the engineer of record.

i.

Desilting basins may not be removed or made inoperable without the approval of the engineer of record and the governing agency.

j.

Erosion control devices will be modified as need as the project progresses and plans of these changes submitted for approval by the engineer of record and the governing agency.

8.

Conduct a minimum of one inspection of the erosion and sediment controls every two weeks. Maintain documentation on site.

a.

Part III.D.4 of general permit UTRC00000 identifies the minimum inspection requirements.

b.

Part II.D.4.C identifies the minimum inspection report requirements.

c.

Failure to complete and/or document storm water inspections is a violation of part III.D.4 of Utah General Permit UTR 300000.

Applicable Ordinances

- Title 101, Chapter 1 General Provisions, Section 7 Definitions
- Title 104, (Zones) Chapter 2
- Title 106, Subdivisions

Summary

The Daisy Estates subdivision would separate three one-acre lots from a 10-acre farm parcel. This development also extends 4550 West Street southward by 300 feet to accommodate the three residential lots. Dedication and construction of the public street are required.

The area of the remaining agricultural parcel amounts to 6.91 acres.

The following section is the staff's analysis of the proposal.

Analysis

General Plan: This proposal conforms to page 51 of the Western Weber General Plan by placing large-lot residential development within areas that are in the general periphery of sewer services.

Zoning: The property is located within the A-1 Zone. The purpose of this zone is stated in the LUC §104-2.

"The purpose of the A-1 Zone is to designate farm areas, which are likely to undergo a more intensive urban development, to set up guidelines to continue agricultural pursuits, including the keeping of farm animals, and to direct orderly low-density residential development in a continuing rural environment."

Site Development Standards:

A-1 Zone:

Minimum lot width: 150 feet

Minimum lot area: 40,000 square feet

Connectivity Incentivized Subdivision:

Minimum lot width: 75 feet

Minimum lot area: 20,000 square feet

Each lot within the development conforms to the minimum lot size allowable by the zoning code.

Road Dedication: Developments that include road dedication require that the County Commission Chair signs the subdivision plat and that the roadway improvements are constructed or that the cost of all improvements plus a 10% contingency fund is deposited with the County Engineering Department.

Flood Zone: This parcel is within an area of minimal flood hazard and determined to be outside the 500-year flood level.

Culinary Water: Taylor West Weber Water District has provided a preliminary will-serve letter containing final requirements and that an escrow account is created for both culinary and secondary water infrastructure.

Pressurized Irrigation Water: Hooper Irrigation Company has provided a preliminary will-serve letter stating that the owner has sufficient shares to connect the property to the pressurized system. Daisy Estates is guaranteed service conditioned upon obtaining final subdivision approval from the county, fees are paid, and that water shares are turned in to Hooper Irrigation.

Septic Systems: The percolation test is complete for all three lots. The Weber-Morgan Health Department has provided septic feasibility for the placement of at-grade systems. The expiration of the septic feasibility letter is set for August 2024.

Review Agencies: The Weber County Planning Division has posted final review comments that will be addressed by a revised plat and a revised street profile. The Engineering Department will post final review comments to the plat and the construction plans. The Weber Fire Department requires that the subdivision plat show the turn-around easement where the road stubbs to the south.

Staff Recommendations

Staff recommends approval of the Daisy Estates subdivision (three lots) and the dedication of an extension to 4550 West Street. This recommendation is based on the following conditions:

1. Final subdivision approval is conditioned upon the developer providing a final will-serve letter from Taylor West Weber Water District and Wilson Irrigation Company.
2. The subdivision improvements are complete or guaranteed financially before the plat is recorded.
3. The developer enters into a Monument Improvement Agreement with the County Surveyor's Office.
4. A signature block for Taylor West Weber Water District is added to the dedication plat.
5. The developer obtain and submit final will-serve letters from Hooper Irrigation and Taylor West Weber Water District before recording the plat.

This recommendation is based on the following findings:

1. The proposed subdivision conforms to the West Central Weber General Plan.
2. The proposed subdivision complies with the applicable County codes.
3. The subdivision conforms to zoning and subdivision ordinances.

RE: PRELIMINARY WILL SERVE LETTER – Daisy Estates Subdivision

The Daisy Estates subdivision is located at approximately 2900 South and 4500 West and consists of 3 building lots. The subdivision is in the boundaries of the Hooper Irrigation Company service area. A formal application has been made to our office.

The subdivision plat plan has been reviewed by Hooper Irrigation. The preliminary plans have been conditionally approved for the above subdivision. There are sufficient shares affiliated with the property to connect to the secondary pressurized system for the building lots and the shares are in good standing.

There do not appear to be any private ditches, tailwater, drain, and/or waste ditches, on the property that would need to be piped. Only this project is in consideration and guaranteed service and the plan review are good only for a period of one year from the date of this letter, if not constructed. A final will serve letter will follow this letter after all plans have received final approval, fees have been paid, and water shares have been turned in to Hooper Irrigation.

Hooper Irrigation's specifications are available at the Company office.

If you have questions, please call 801-985-8429.

Sincerely,

Michelle Pinkston

RE: Preliminary Subdivision **Determination**
Daisy Estates, 3 Lots
Parcel #: 15-084-0032
Soil Log #15456

The soil and percolation information for the above-referenced lot have been reviewed. Culinary water will be provided by Taylor-West Weber Water Improvement District, an approved public water system. **A letter from the water supplier is required prior to issuance of a permit.**

DESIGN REQUIREMENTS

Lots 1-3: Anticipated ground water tables not to exceed 24 inches, fall within the range of acceptability for the utilization of an At-Grade Treatment System as a means of wastewater disposal. Maximum trench depth is limited to 0 inches. The absorption system is to be designed using a maximum loading rate of 0.65 gal/ft²/day as required for the sandy loam, granular/blocky structure soil horizons.

Plans for the construction of any wastewater disposal system are to be prepared by a Utah State certified individual and submitted to this office for review prior to the issuance of a Wastewater Disposal permit.

The following items are required for a formal **subdivision review**; application, receipt of the appropriate fee, and a full sized copy of the subdivision plats showing the location of exploration pits and percolation tests as well as the documented soil horizons and percolation rates. A subdivision review will not occur until all items are submitted. Mylars submitted for signature without this information will be returned.

Each on-site individual wastewater disposal system must be installed in accordance with R317-4, Utah Administrative Code, Individual Wastewater Disposal Systems and Weber-Morgan District Health Department Rules. Final approval will be given only after an on-site inspection of the completed project and prior to the accomplishment of any backfilling.

Please be advised that the conditions of this letter are valid for a period of 18 months. At that time the site will be re-evaluated in relation to rules in effect at that time.
